Write your Python Analysis

› 📋 Available columns in df

Start from an example (optional)

— choose an example —

Your Python code

```
result = (
  df.groupby("product_name", as_index=False)
    .agg(total_revenue=("total_amount", "sum"),
         orders=("order_id", "count"))
    .sort_values("total_revenue", ascending=False)
    .head(10)
)
```
